

Pro-Snow Machine Instructions

1/ Place the snow machine in position on a solid, flat surface using the adjustable bracket as a stand. Alternatively, you can suspend it from a truss or stand using a clamp and safety restraint.

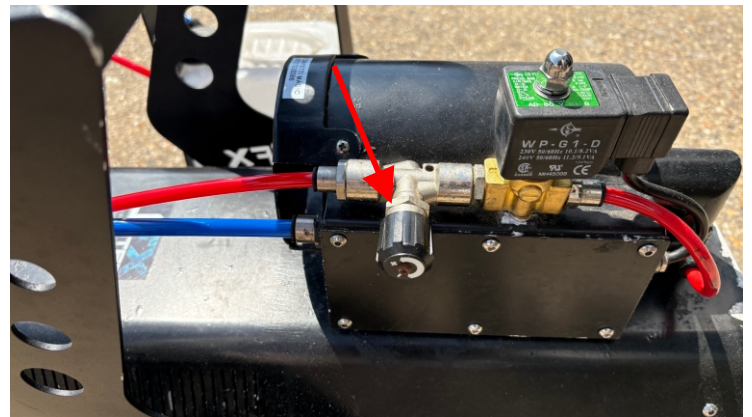

2/ Fill the bottle with diluted snow fluid (check ratio on snow concentrate bottle). Attach the red and blue pipes between the bottle and the machine. Push the pipes into their respective holes as in the photo below.

3/ Connect the power cable to the machine.

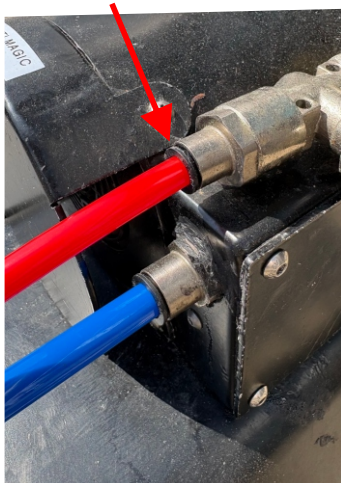

4/ When ready, switch the power on at the socket and turn the black knob to increase or decrease the effect intensity as required.

5/ Turn the power off to stop the effect.

6/ When finished, to remove the pipes, push back on the black collar and pull the pipe in the opposite direction.

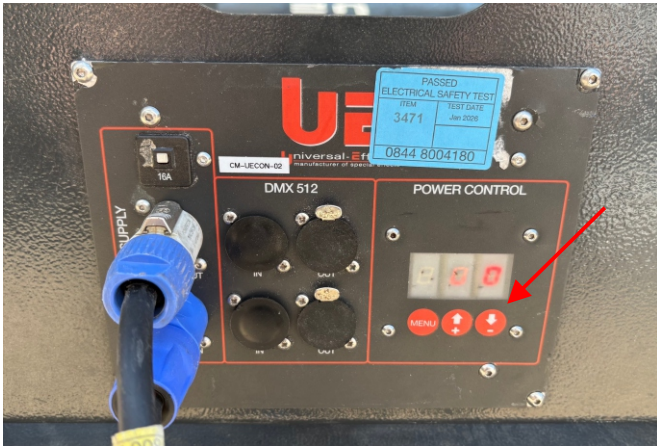

Confetti Magic Ltd

8/ Open the valve on the reservoir to start the flow of snow fluid.

9/ Adjust the flow of snow fluid using the black knob to increase or decrease the effect density.

10/ To stop the snow, press the minus button again for 1 second.
